

Data Retention and Disposal Policy

Ciunciusky Trust

SYSTEM	Hundie, an internal expense-management and bookkeeping application
SECURITY CONTACT	Alex Ciunciusky, Owner · alexbhp@gmail.com
EFFECTIVE	June 2026
REVIEW	At least once a year, and after any major change to the system

1. Purpose

This policy describes what data the Hundie application keeps, how long it is kept, and how it is disposed of when it is no longer needed. It applies to the financial data Hundie receives through Plaid and the settings the owner configures. It is maintained by the Ciunciusky Trust.

2. What we keep and for how long

- **Transaction records.** Kept while they are needed for bookkeeping and any applicable tax recordkeeping. They are removed when they are no longer needed or when the owner requests deletion.
- **Plaid access tokens and account mappings.** Kept only while a bank connection is active. They are deleted as soon as the connection is removed.
- **Account and sign-in information.** Kept while the account is active, and removed when the account is closed.

3. How we dispose of data

- Removing a bank connection in the application revokes the connection at Plaid and deletes the stored access token and account mappings from the database.
- On request, or when an account is closed, the related transaction records and settings are deleted from the database.
- Access tokens are stored only as encrypted text. Once a token or its encryption key is removed, the stored value can no longer be used.
- The database is hosted on Supabase, which keeps short-term backups for recovery. Deleted data ages out of those backups on the provider's normal backup cycle.

4. Review

This policy is reviewed at least once a year and after any significant change to how the application stores or handles data.

5. Contact

To request deletion of your data or to ask a question about retention, contact Alex Ciunciusky at alexbhp@gmail.com.
